HEALTHCHAIN offers a model for co-created, demand-driven technological solutions in health care by creating optimal value-chains. It provides a framework in which innovations do not arise from technological vacuum and therefore have a short lifespan.

10

European regions from 8 countries

33

SMEs cocreating solutions with healthcare organisations

24

Digital solutions to be implemented in 10 hospitals focused on:

Self-management

Care coordination

Data Integration & Management

Education & Information

Remote patient monitoring

Data Analytics & AI

Symptoms tracking

Diagnostics

Healthcare Organisation

Rijnstate

Rijnstate is a top clinical teaching hospital in the Netherlands and offers inpatient and outpatient services in 29 medical specialties, as well as emergency care, with a special focus on oncology, immunology, vascular care, and vulnerable elderly.

Ecosystem supporter

East Netherlands Development Agency (OOST NL)

The East Netherlands Development Agency (Oost NL) helps entrepreneurs in East Netherlands accelerate innovations and bring these to market. Together, we strive for a sustainable future with technological advancements and innovations in food, health, tech and energy.

VIRTUAL ACUTE CARE

Virtual Acute Care (VAC) is a cloud-based telehealth solution designed to enhance clinician workflows in acute care settings. VAC integrates, collects, and prioritizes clinical information to support telemonitoring, coordination, and decision-making for ICU patients.

Health-Ecore

Virtual Acute Care is a cloud-based telehealth solution that supports healthcare organizations to transform care delivery by implementing innovative care models. Virtual Acute Care receives, analyses, and displays clinical datasets for a population of patients cared for or admitted to a single hospital or across multiple hospitals.

-  Allows VCC nurses to monitor more patients with less system-switching and increased efficiency.
-  Prevents remote monitoring errors by providing a unified dashboard for patient data and alerts.
-  Optimizes the use of staff by clustering and categorizing patients based on their care level.
-  Integrates siloed software solutions for streamlined notification management of newly discharged patients
-  Improves collaboration & communication between VCC staff for seamless transition of work and continued patient care.
